A DIVISION OF JACK HENRY & ASSOCIATES INC®

## Stay on Top of the Shifting Landscape of Disaster Recovery

### BUSINESS VALUE

- Save Money
- Improve Operations
- Reduce Risk

### COMPATIBILITY

- SilverLake System®
- CIF 20/20®
- *Centurion Co-Location and Centurion Hosted High Availability provide banks with affordable, next-generation alternatives for their redundant hardware platforms.*

### IT WORKS LIKE THIS...

Centurion Co-Location and Centurion Hosted High Availability provide banks processing in-house on the CIF 20/20 and SilverLake System core platforms with affordable, next-generation alternatives for their redundant hardware platforms.

Like all of Centurion's services, these solutions help ensure compliance with related regulatory requirements and leverage a best practices methodology based on more than 20 years of experience in providing disaster recovery services exclusively for financial institutions.

### NEXT-GENERATION REDUNDANT HARDWARE...

Centurion Co-Location enables banks to relocate their redundant hardware platforms to the "Mountain" – the industry's most secure disaster recovery facility located 175 feet underground. This solution provides banks with an affordable, next-generation alternative for their redundant hardware platforms. Jack Henry Banking provides banks with the space, redundant power sources, climate control systems, telecommunications, network connectivity, and security and monitoring services. The ability to house hardware platforms for multiple banks in this hardened facility provides the access to the human and physical resources difficult for individual banks and even bank holding companies to replicate internally.

### **FULLY MANAGED DATA REPLICATION...**

Centurion Hosted High Availability is a pay-as-you-go data redundancy service that leverages the sophisticated infrastructure supporting Jack Henry Banking's OutLink Data Centers™ – the outsourced information and transaction processing services used by more than 650 financial institutions nationwide. This solution provides banks processing in-house on the CIF 20/20 and SilverLake System core platforms with an affordable fully managed service that eliminates the need for banks to own, house, maintain, and upgrade redundant hardware platforms. Banks' mission-critical business and customer data is replicated to the "Mountain" – the industry's most secure disaster recovery facility located 175 feet underground – in a near-real-time environment using Mimix software.

### **TRUST THE CENTURION DISASTER RECOVERY EXPERTS...**

Centurion provides seasoned technical experts with proven working knowledge of Jack Henry Banking's software solutions, core and peripheral hardware platforms, and bank operations. Centurion's "Mountain" and its strategically located regional disaster recovery centers are fully equipped with the technology platforms and redundancies necessary to mirror the operational infrastructures of diverse banks and to recreate unique business environments. Centurion's professional staff can also assist banks with conducting rigorous annual testing of disaster recovery plans and processes, and handle any necessary updates or modifications.

**WHAT IT DOES:**

- Provides banks processing in-house on the CIF 20/20 and SilverLake System core platforms with affordable, next-generation alternatives for their redundant hardware platforms.
- Enables banks to relocate their redundant hardware platforms or replicate data to the “Mountain,” the industry’s most secure disaster recovery facility located 175 feet underground.
- Provides banks with space, redundant power sources, climate control systems, telecommunications, network connectivity, and security and monitoring services.
- Offers a fully managed, pay-as-you-go data redundancy service that leverages the sophisticated infrastructure supporting Jack Henry Banking OutLink Data Centers.
- Offers access to industry and technical experts with working knowledge of Jack Henry Banking’s software solutions, core and peripheral hardware platforms, and bank operations.
- Leverages a best-practices methodology based on more than 20 years of experience providing disaster recovery services.

**WHAT IT DOES FOR YOU:**

- Helps safeguard banks of all sizes against disasters.
- Minimizes potential business interruptions and the related financial losses.
- Eliminates the need for banks to own, house, maintain, and upgrade redundant hardware platforms.
- Reduces the customer inconvenience caused by unavoidable business interruptions.
- Serves as an effective customer attraction and retention tool by offering peace-of-mind to existing and potential bank customers.
- Helps ensure compliance with related regulatory requirements.

*The Branson “Mountain” is a world-class underground business recovery facility nestled in the Ozark Mountains near the JHA Corporate Headquarters in Monett, Mo. Originally a two million square foot mountain mined for dolomite rock, this state-of-the-art facility is unlike any other in the country – and it’s where your information will be stored when you implement Centurion Co-Location or Centurion Hosted Failover. This next-generation, hardened disaster recovery facility uses replication to duplicate all activities that take place in Jack Henry Banking’s SilverLake System and CIF20/20 core data centers almost immediately after they happen. Centurion performs frequent tests of the recovery capabilities from the Branson site to help ensure it remains impervious to natural disasters such as hurricanes, floods, and tornados.*
