

jVault®

## Customized, Digital Backup and Recovery Solution for IBM® Power™ System-Based Data

*As auditors tighten security around the financial industry, banks are looking for more efficient ways to perform large-scale daily operations. Digital backup is a cost-effective, secure alternative to using traditional tapes for incremental backups. jVault helps ensure your data is safe and accessible.*

## Rest Assured Your Data is Secure

### BUSINESS VALUE

- Improve Operations
- Reduce Risk

### COMPATIBILITY

- SilverLake System®
- CIF 20/20®

### SECURE DATA TRANSMISSION ...

jVault is an online data backup solution that enables IBM Power System users to duplicate mission-critical data at a secure off-site location. This innovative solution leverages contemporary browser-based technology to perform digital data backups, alleviating the inherent risk associated with physically transporting tapes from one location to another.

### REDUCE RECOVERY TIME ...

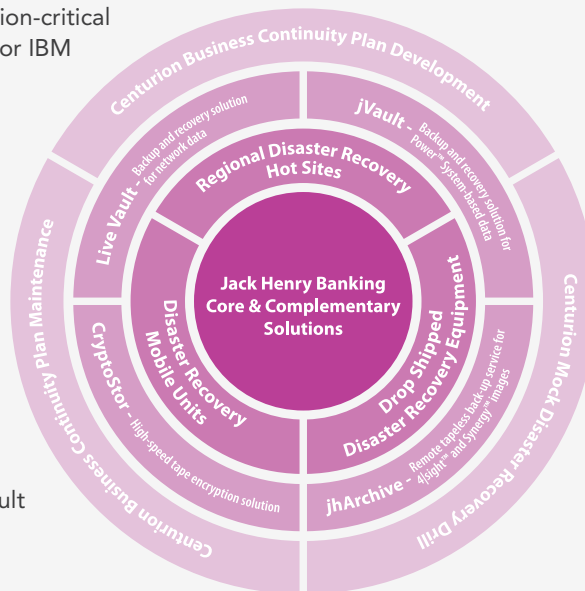

jVault creates opportunities to designate recovery points periodically throughout the business day, saving this mission-critical data to a remote back-up recovery center. This solution can support a complete recovery in a matter of a few hours, depending upon a bank's individual needs. Centurion analyzes each bank's disaster recovery needs and customizes its back-up requirements accordingly. jVault complements Centurion LiveVault, which supports network data backup and recovery for Windows® servers installed at bank locations. This solution also complements Centurion jhArchive, the remote digital back-up service for 4|sight™ and Synergy™.

### PROMOTE PEACE-OF-MIND ...

This solution provides peace-of-mind to bankers and customers alike by reducing the likelihood that unexpected disasters or business interruptions will impact financial transactions. In addition, this fully managed service allows banks' IT resources to dedicate their time to more strategic business objectives. jVault promotes security and protection by helping banks with compliance and other related regulations, and provides banks with a superior audit trail for all backed-up data.

### WHAT IT DOES:

- Provides online backups of mission-critical customer and transaction data for IBM Power System users.
- Stores data in a secure off-site facility.
- Provides immediate access to and restoration of data from virtually any point in time.
- Leverages contemporary browser-based technology to perform digital data backups.
- Provides superior data audit trails.
- Complements Centurion LiveVault and Centurion jhArchive.

### WHAT IT DOES FOR YOU:

- Helps ensure that mission-critical business information is securely protected and readily accessible.
- Expedites the business recovery process.
- Reduces the likelihood that unexpected disasters or business interruptions will impact financial transactions.
- Allows resident IT resources to dedicate their time to more strategic business objectives.
- Helps ensure compliance with related regulatory requirements.
