

jXchange™

Open Connectivity Between Core, Complementary, and Third-party Products

This contemporary integration utility increases banks' operating flexibility and enables them to leverage their existing and future technology investments.

Extend Your Technology Possibilities with jXchange

BUSINESS VALUE

- Save Money
- Improve Operations

COMPATIBILITY

- SilverLake System®
- CIF 20/20®
- Core Director®

jXchange helps banks enhance their competitive positioning and maximize their current technology investments while seamlessly fulfilling ongoing niche product requirements.

Although Jack Henry Banking® provides one of the broadest product offerings available, we know that some of our core bank clients still want niche products outside of our product offering. If you're looking for an open technology platform that can help improve your operations and efficiencies and help you maximize your technology investments, consider jXchange.

IT WORKS LIKE THIS ...

jXchange provides a Web-based services-oriented architecture on a .NET platform that offers open connectivity between Jack Henry Banking core and complementary solutions and third-party products. This contemporary integration utility increases banks' operating flexibility and enables them to leverage their existing and future technology investments.

A BETTER WAY TO TRANSLATE DATA ...

Before jXchange, software applications from Jack Henry Banking and third-party vendors required complex interfaces to move data to and from core and complementary products. jXchange replaces these high-cost, high-maintenance product interfaces with an open, standards-based translator of business information between Jack Henry Banking and third-party software products, regardless of platform, operating system, or development language.

SAVE MONEY AND INCREASE OPERATIONAL FLEXIBILITY ...

jXchange provides integration that modernizes operational, financial, customer, and account information sharing capabilities among banking software products while reducing the costs traditionally required for software development, deployment, and maintenance. This innovative middleware enables banks to benefit from lower technology barriers for new product introductions, improving speed-to-market with competitive offerings and offering wider flexibility for selecting business partners and technology vendors.

BOOST CUSTOMER SATISFACTION ...

Jack Henry Banking provides direct and unified support to ensure that banks have practical, efficient, and maintainable technology that meets their unique needs. jXchange offers banks the ability to deliver new products and enhancements to customers faster, easier, and at a lower cost, which can result in higher customer satisfaction and retention.

WHAT IT DOES:

- Provides modern, standards-based interoperability through a services oriented architecture using the Windows® server family and .NET Web services.
- Translates business information between Jack Henry Banking and third-party software products, regardless of platform, operating system, or development language.
- Replaces high-cost, high maintenance product interfaces with an open, standards-based translator of business information.
- Modernizes operational, financial, customer, and account information sharing capabilities.
- Enables banks to seamlessly manage niche products.
- Offers uniform levels of service among many different products.

WHAT IT DOES FOR YOU:

- Increases banks' operating flexibility and enables them to leverage their existing and future technology investments.
- Offers easier rollout of product releases through increased product compatibility.
- Reduces costs for software development, deployment, and maintenance.
- Provides the ability to deliver new products and enhancements to customers faster, easier, and at a lower cost.
- Provides banks wider flexibility when selecting business partners and vendors.
- Improves speed-to-market with competitive offerings.

jXchange offers banks the ability to deliver new products and enhancements to customers faster, easier, and at a lower cost, which can result in higher customer satisfaction and retention.
