

Synergy eSign™

Document Presentment and Signature Capture

A growing number of banks are saving time and money by replacing inefficient, labor-intensive paper processes with digital signature and document solutions. Synergy eSign encompasses all of the state-of-the-art features you'll need in a digital signature solution while offering the security and convenience your customers expect.

Is Your Digital Signature Technology Adequately Serving Your Bank and Your Customers?

BUSINESS VALUE

- Save Money
- Improve Operations

COMPATIBILITY

- SilverLake System®
- CIF 20/20®
- Core Director®

- *This innovative solution enables banks to further reduce operating expenses and the time typically required for online document availability from days to minutes.*

IT WORKS LIKE THIS ...

Synergy eSign is a browser-based document presentment solution that leverages state-of-the-art signature capture functionality. This module of Synergy, powered by Integrated Media Management (IMM), digitally captures legally binding signatures and permanently and securely embeds them into non-editable and auto-indexed PDF files, eliminating the time and resources required to scan, copy, and file paper documents. Synergy eSign enables customers to sign electronic documents and have their signatures securely digitized and embedded into the document, either locally or at the branch. This solution also supports multiple signatories at separate locations. By replacing time-consuming manual methods with digital signature capture, banks can improve their overall ROI through enhanced process efficiencies.

Synergy eSignWeb™ is a sub-module of Synergy eSign that captures digital signatures via the Web and includes secure document delivery. This gives bank customers the ability to view and digitally sign documents securely on the Internet with a true PKI digital signature. Synergy eSignWeb offers banks the ability to expand their geographical reach and capture and retain more business.

IT'S USER-FRIENDLY AND SECURE ...

Adding digital signature capture into the transaction process can be virtually transparent. Synergy eSign can be used in any business transaction that uses electronically captured documents that require signatures such as signature cards, loan applications, and insurance enrollments. Synergy eSign captures the signature and embeds it into the image. The signed document can be printed and reviewed before final acceptance.

Once the document is finalized, the auto-indexed signed e-documents are filed into the image repository. At this point, the legally binding signature has been permanently "burned" into the document and cannot be altered, removed, or transferred to another document.

IT IMPROVES OPERATIONS AND SAVES YOU MONEY ...

Synergy eSign technology allows banks to keep documents in electronic form, eliminating the need to produce, process, scan, or index paper documents. This innovative solution enables banks to further reduce operating expenses and the time typically required for online document availability from days to minutes.

When used as part of the document management process, Synergy eSign also expedites business processes and improves productivity by providing executed documents and contracts readily available for network or Internet access.

WHAT IT DOES:

- Enables customers to sign electronic documents and have their signatures securely digitized and embedded into non-editable and auto-indexed PDF files, either locally, at the branch, or securely on the Internet with eSignWeb.
- Provides a digital signature for documents that have been captured electronically, such as signature cards, loan applications, and insurance enrollments.
- Displays the signed document on-screen, allowing it to be printed and reviewed before final acceptance.
- Stores the indexed data and files of the signed e-document in the image repository.
- Permanently “burns” the legally binding signature into the document and prevents it from being altered, removed, or transferred to another document.
- Captures documents at the time of transaction, which can reduce delays to online availability from days to minutes.
- Allows executed documents and contracts to be readily available via network or Internet access.

WHAT IT DOES FOR YOU:

- Eliminates the time and resources required to scan or copy paper documents that require signatures or initials.
- Improves overall ROI through enhanced process efficiencies.
- Eliminates paper files and records and the need to process paper documents.
- Adds the digital signature into the transaction process without introducing any significant delays to the existing process.
- Expedites business processes and improves productivity.

The Synergy Enterprise Content Management™ (ECM) platform enables banks to securely capture, retrieve, store, and distribute documents, check images, and report data. This sophisticated solution supports virtually all types of electronic information, including reports, scanned images, PDFs, photos, sound files, application documents such as Microsoft Office Word and Excel, and essentially any electronic file that is in an industry standard format. The ability to create a secure, central document repository with immediate desktop delivery of archived documents improves enterprise-wide productivity and effectiveness, streamlines operations, supports better-informed and timelier decisions, and enhances customer service and responsiveness. Jack Henry Banking supports diverse operational environments with the ability to seamlessly install ECM functionality in-house, or deliver key components through its software-as-a-service (SaaS) Synergy Express offering.
